[1] Barrels of 35 Canadian gallons [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries [3] Refinery production (from crude oil condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene [7] Includes aviation gasoline and aviation turbo fuel [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965 Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products

---

A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

**Source: Housing Starts and Completions (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act.

---

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] The above table covers all sales to users and includes sales by manufacturers through their dealers and agents as well as the sales of importers made directly to users. Even though sales are to users, i.e. farmers, values are stated at the dealer's net buying price or at wholesale price

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood pudding etc. [6] Includes solid, coated, bulk, packages and novelties.

---

Note: Components may not add to totals because of rounding

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality; this series is repeated in the unadjusted form

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are. Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Imports by Commodities (65-007), Statistics Canada.**

## Section 12 · Transportation

22 1. Carloadings of Revenue Freight
23 2. Operating Statistics of Canadian Railways
23 3. Operating Statistics of Air Carriers in Canada
24 4. Operating Statistics of Canadian Pipelines
24 5. Shipping Traffic

## Table 1: Carloadings of revenue freight on Canadian railways[1] (thousand cars)

| Year and month | Total railway revenue freight loadings (carload and non-carload) ('000 tons) | | Total revenue cars loaded (carload only) | Farm products and food | | | | | | Mine products | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | unadj | S.A. | | Wheat | Other grain and grain products | Fresh fruits and vegetables | Other agriculture products | Animals and their products | Prepared food products | Iron ore and concentrates | Other metal ores and concentrates | Potash | Coal, sand, cement and other mine products |
| D | 5324 | 5325 | 5300 | 5301 | 5302 | 5303 | 5304 | 5305 | 5306 | 5307 | 5308 | 5309 | 5310 |

---

Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Pro- incial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by anadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series

---

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ordinary sales in Canada. [3] Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts.

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines.

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: Department of Finance.**

# Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Summary Reference Index* (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

*CANSIM Main Base Series Directory* (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

*CANSIM Mini Base Series Directory* (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

# Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
N. Cholette – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

# Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

# Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 6, Table 17 – Radio and television receiving sets

The series total radio receivers has been removed with this issue at the request of the source.

Section 10, Table 6 – Consumer Credit

The series trust and mortgage companies that previously appeared as a quarterly series will now appear as a monthly series.

# Small Business – Statistics versus Paper Burden

V.R. Berlinguette*

Last fall's Throne Speech contained an important government policy statement on small business, including, among other things, mention of an attempt to cut down the number of forms and questionnaires that small businesses in Canada are asked to fill out for government.

While everyone knows that this burden is already heavy, a fact not so well known is that at least two recent government investigations on this matter concluded that Statistics Canada accounts for only about 20 per cent of the total reports businesses are required to fill out. By far the heaviest burden results from requirements of other government departments and agencies, including provincial governments. However, Statistics Canada does seem to attract a disproportionate amount of criticism on this issue, seemingly serving as a handy lightning rod for absorbing all sorts of complaints and aggravations. And we are doing something about it.

The minister of state for small business has already referred to the large number of small firms that will not be required to report to certain surveys, because of arrangements Statistics Canada has made in gaining access to administrative records of other government departments, notably income tax records.

The Business Statistics Field, a division of Statistics Canada, is concerned principally with the production of economic statistics, which provide information on the industrial and commercial activity of the country, and which also feed into the system of national accounts. The Field consists of two branches – Industry Statistics and General Statistics, as outlined below:

*Industry Statistics*
- Manufacturing and primary industries
- Transportation and communications
- Merchandising and services
- Construction

*General Statistics*
- Prices
- Labor
- Financial
- External trade

The Business Register and Profiling Division constitutes integral part of the Business Statistics Field. This division is responsible for developing and maintaining an up-to-date master file or register of all businesses for use by divisions in their survey-taking activities. The basic source of information for births and deaths of businesses is again Revenue Canada. The Business Register contains about 1,100,000 active businesses, exclusive of farmers and fishermen. Of these, some 800,000 to 900,000 have a gross business income of $100,000 or less. This cut-off is used in annual censuses of industry as a level of revenue, below which firms, in general, receive simplified questionnaires.

## Small Business Defined

Various definitions of small business exist within the Bureau depending upon the particular survey or surveys involved. The most widely recognized definition is that used in the monthly employment survey where firms having 20 employees or less is used to define small business. The Ministry of State for Smal Business also uses number of employees as the main criterion, firms having less than 100 employees in manufacturing and less than 50 in all other sectors of the economy are being considered 'small'. Whatever definition is adopted, there is general agreement that while this large universe of small businesses accounts for some 80 per cent to 90 per cent of the total number of businesses in Canada, they account for a much smaller proportion of total business activity, depending on the location and the kind of industry under consideration. Since Statistics Canada's mandate extends to the measurement of total economic activity at the detailed industry level, and at least at the provincial level, we cannot ignore the contribution of small businesses to our various measures of economic activity. What it *must* do, however, is strive mightily to keep the reporting burden to a minimum.

---

* V.R. Berlinguette was formerly Assistant Chief Statistician. Business Statistics Field, Statistics Canada. This article has been adapted from a text published in the *Canadian Business Magasine*, June 1977.

## Pressure from all sides

Of course, the pressure to do just that is being applied from all sides, and the small business community itself is now well organized and has become quite vocal in this cause.

In contrast to the large companies staffed with trained analysts and economists, small businessmen generally don't use statistics directly. And because they are not so well equipped to respond, the real cost seems proportionately greater to them. Thus the whole process is doubly irritating and looked on as a major waste of time and effort.

What they generally fail to consider, of course, are the benefits they gain indirectly from the use of statistics by the business press and trade publications to prepare articles and develop studies of direct interest to individual business subscribers; by trade associations to present briefs to federal and provincial governments on tariff and industrial and commercial policy matters; by governments themselves to formulate economic programs and policies; and by commercial research and survey firms who can, for a fee, carry out the kind of special inquiry to meet the immediate information needs of particular customers. The use of statistics for these purposes no doubt contributes to the more orderly and efficient operation of the economy and of individual markets, and does benefit the small businessman.

## Under consideration

But even if small and medium size firms already get some return for their statistical dollar, their supply and use of statistics is still under consideration. The minister is interested in providing better service for the independent businessman while at the same time providing substantial relief from the annoying and costly response burden.

One of the major ways in which the paperwork burden can be minimized is the exploitation of government administrative records of one kind or another. For example, statistics dealing with education, health, crime, births, marriages and deaths, etc., are obtained from provincial government files. Public finance statistics are, of course, generated within the government sector, as are statistics dealing with pension plans, working conditions, unemployment insurance, and other related subjects.

The entire program of our External Trade Division is based on Revenue Canada and Customs documents. Approximately 12,000,000 import and export documents are used each year to produce information on Canada's external trade.

With the 1971 revision to the Statistics Act, Statistics Canada gained access to the full range of income tax returns. The use of such returns, as a substitute for questionnaires, represents the most significant step so far to reduce paperwork for small businesses. This year alone, for example, financial data covering over 120,000 small firms in the transportation, construction and manufacturing industries will be obtained from tax records. By the early 1980's, it is expected that the number of firms that will be exempt from the burden of completing a number of questionnaires, will be something in the order of 350,000. This includes almost 200,000 small retail, wholesale and service trade businesses which will be exempt from the periodic merchandising and services surveys, tax returns being used to obtain most of the required information. The minister of state for small business has estimated that, given the implementation of all active and projected response reduction programs, a saving of $40 million to the small business community would be realized over the next six years.

Another major contribution to cutting down the reporting burden is the use of sampling techniques. Sample surveys are conducted in practically every division of the Business Statistics Field. Among the more important surveys are the monthly manufacturing shipments, inventories and orders survey and the monthly retail trade survey. In addition, nearly all the 200 current commodity surveys of the Manufacturing and Primary Industries Division are sample surveys, as are the preliminary, mid-year and actual estimates of the capital and repair expenditures survey. Sampling is also used in monthly and quarterly surveys of sales finance firms, restaurants and many other types of businesses in the merchandising and services field. These surveys involve many thousands of small businesses, and sampling effects substantial reduction in reporting burden. To illustrate: there are approximately 160,000 retailers in Canada. Only 18,000 of these, or just over 10 per cent, are randomly selected for the monthly retail trade survey, this size sample being just large enough to produce an accurate estimate of the volume of retail sales in Canada and for each province. Thus, 90 per cent of retailers are exempt from reporting to this survey.

The Labor Division also uses sampling for small firms in its monthly survey of employment and earnings. A new technique, sample rotation, was introduced in this survey two years ago and brought about a substantial reduction in response burden. This particular survey is combined with that of job vacancies in such a way that job vacancies are surveyed twice a month, with the end-of-month enquiry also covering employment. About 32,000 firms are asked to report for the mid-month occasion and another 32,000 firms for the end-of-month occasion. These 64,000 firms also represent about 10 per cent of the roughly 660,000 employer firms in Canada. Sample rotation methodology is such that all firms are required to report for a period of 12 months. Then about 50 per cent are rotated out for a period of three years; some 20 per cent are rotated out for two years; and about 30 per cent are rotated out for periods ranging from three months to two years. Less than 0.5 per cent are required to report permanently. These represent firms which, due either to the number involved in a particular industry, or to their geographical location, cannot be subject to rotation.

## Forms for small businesses

Another practice followed at the Bureau in minimizing response burden is the use of short forms for small businesses. In these, questions requiring reference to accounting and production records are substantially fewer and more simple than those asked of larger firms which usually account for the bulk of the business activity being measured.

Finally, plans are being considered for the development of a "small business frame" for the integration of sample surveys of small businesses. The aim here is to ensure that the same business is not chosen in more than one sample survey. At the present time, it is possible for the same firm to be picked in two or more of the surveys in which sampling is used.

These then, are some of the steps being taken to relieve small business of the reporting burden. In addition, of course, there are other methods and techniques to reduce response burden. Cooperative collection arrangements with other government departments and agencies permit the sharing of common data and thus avoid duplication. Such arrangements are usually in the form of joint surveys, where Statistics Canada acts as the collection agency on behalf of other government departments or agencies, including the provinces. Several larger surveys, such as the annual Census of Manufactures and Capital Investment and Repair Expenditures, are done in this manner.

Industry advisory committees are also an effective means of controlling the growth and complexity of statistical reporting. In these committees, industry associations play a major role in representing the interests of their members. At the present time, there are over 100 such committees in existence and they cover practically every major industry in the country. Paperwork burden is always a key item of discussion at these meetings.

One division of the Bureau actually monitors the surveys of other federal government departments. The Special Surveys Coordination Division was set up a few years ago to implement the Treasury Board's so-called "Rule of 10" policy directive. This stipulated that surveys by other government departments, involving more than 10 respondents, must be reviewed by Statistics Canada to ensure that avoidable duplication and methodology problems are brought to the attention of the departments involved.

Last year, a special task force was established to develop a program aimed at improving the integration of economic statistics. This concerns mostly the universe of the largest firms and involves a more coordinated collection and confrontation of data from different surveys. The aim is to improve the "fit" of data items to enable people to relate data from different surveys and be confident that these produce a consistent picture, and to enable them to use similar data items interchangeably and thus reduce duplication between different business surveys. For instance, data on employment and salaries and wages collected in the annual census of industry surveys would be replaced by averages of similar data collected in the monthly employment and earnings surveys.

Notwithstanding all efforts to reduce substantially the respondent burden, Statistics Canada will still need some information from small business in order to do their job properly, servicing statistics users in both government and industry. There are certain data which are just not available from other sources and for which small samples are essential – examples are data on job vacancies and on manufacturing new orders. Also, certain basic information on nature and size characteristics of businesses is usually not sufficiently complete, in most administrative reports, to permit reliable coding and classification for statistical purposes.

## More meaningful service

Finally, there are some efforts being made to provide a more meaningful statistical service to small business. At the moment, a study is under way, using tax returns, to develop key operating ratios for a segment of the retail trade industry in Canada. What the small businessman so often wants to know is what his competition is doing, so he can compare his own performance with that of similar firms in his area of business – ratio of employees to sales, ratio of total operating costs to revenue, ratio of profits to sales. National aggregates have no relevance to a small firm located in a single area of the country. What the Business Statistics Field is aiming for is the provision of provincial and even smaller area operating ratios or specific kinds of business – subject, of course, to he confidentiality provisions of the Statistics Act.

Statistics Canada has recently published a booklet, *How a Manufacturer can Profit from Facts,* which is a modernized version of the earlier, and very successful, *How to Profit From Facts.* It contains information on individual manufacturing, retail and other small businesses, showing how to use statistics produced by the Bureau. Examples were given of individuals considering establishing a new business, of others wishing to expand their operations, of still others generally interested in comparing the efficiency of their operations with that of other similar businesses. It is available free of charge from Statistics Canada, Ottawa. ■

# Experimental study: A consumer price index for low-income families

Gordon Walford[*]

In response to numerous requests from users to provide information on consumer price change for population groups other than those represented in the official CPI, the Prices Division of Statistics Canada has been investigating the subject of consumer price indexes for low-income earners for some time. Early in 1974, following a detailed analysis of data from the 1969 Family Expenditure Surveys, the decision was made to produce an experimental CPI for a group of low-income families living in cities with urban populations of 30,000 or more; the group comprised families of two adults with one or more children and incomes in 1969 of less than $6,000.

The index which was produced was a weighted average of price indexes for some 300 groups of goods and services. The price series used were based on national CPI data, and the weights used to aggregate them were derived from the expenditures in 1969 of low-income families as defined above (reported in the 1969 Family Expenditure Surveys). The weighting pattern was developed using imputations and other adjustments[1] similar to those applied in producing the weighting pattern for the official CPI when it was revised on the basis of 1967 expenditure weights. The only exception in this regard was the weight of the "new houses" portion of shelter. This weight is defined as the annual depreciation of the stock of houses owned and lived in by a given population,[2] and in the official 1967-weighted CPI was estimated indirectly from data on purchases an sales of houses by the official target group (families of 2-6 persons earning between $4,000 and $12,000 and living in cities of 30,000 or more popu lation) in the reference year. Similar estimates for low-income families would be subject to a high sample error since those families did not participate to a great extent in such transactions. For this reason, depreciation is estimated as two percent of the value of the stock of housing owned and lived in by these families in the reference year. This is consistent with the new methodology to be introduced in the revision of the official CPI based on 1974 expenditure weights.

The percentage weights for the low-income families series and those of the official target group are presented below, both expressed in prices of April 1973:[3]

Table 1. Expenditure weights, percentage terms

| | Low-income families (1969 quantities, April 1973 prices) | | | CPI target group (1967 quantities, April 1973 prices) | | |
|---|---|---|---|---|---|---|
| All-items | | | 100.0 | | | 100.0 |
| Food | | 31.6 | | | 26.3 | |
| Housing | | 33.7 | | | 32.5 | |
| Shelter | 20.4 | | | 19.9 | | |
| Tenancy | 12.1 | | | 7.8 | | |
| Home ownership | 8.3 | | | 12.1 | | |
| Household operation | 13.3 | | | 12.6 | | |
| Other major components | | 34.7 | | | 41.2 | |
| Clothing | 9.4 | | | 10.2 | | |
| Transportation | 11.1 | | | 14.3 | | |
| Health and personal care | 4.1 | | | 4.3 | | |
| Recreation, education & reading | 5.4 | | | 6.6 | | |
| Tobacco and alcohol | 4.7 | | | 5.8 | | |

---

[*] Mr. Walford is a statistician in the Development and Analysis Unit, Prices Division. This project originated in the Central Research Section of Prices Division, under the direction of Anthea Foster and was based on a background study performed by Mr R.F. Fowler. The author wishes to thank his colleagues in the Prices Division for their valuable assistance in both the overall project and the preparation of this article.

[1] See The Consumer Price Index for Canada (1961 = 100) Revisio Based on 1967 Expenditures, Statistics Canada, Catalogue No. 62-539, p.9.

[2] See Catalogue No. 62-539, op. cit., pp. 9, 17

[3] Comparison of the experimental consumer price index for low-income families (1969-weighted) with the official CPI (1967-

Two features of the above comparison deserve particular attention because of their impact on the overall difference between the two consumer price indexes:

- low-income families spend considerably more on food than do members of the CPI target group, as a percentage of their total expenditures (and therefore food price movements have a greater impact on the low-income series than on the official CPI)
- within the shelter component of housing, tenancy is more important to low-income families than home ownership while the reverse is true for the official target group.

The results of the experimental index calculation are shown in Table 2, for the all-items series and selected components, along with the corresponding official CPI data. Indexes are presented for the last month of each quarter, from June 1973 through June 1977, and all but the last two lines are on an April 1973 time base. At June 1977 the two all-items indices display relatively little divergence, the official CPI being higher in spite of quite commonly-held opinions to the contrary. For the most part the comparative behaviour of the two overall series may be explained by weights and price trends for food and shelter.

Over the period as a whole food prices rose more than other prices (cf. "food" series and "all-items ex.food" series); this, other things being equal, would result in a higher all-items series for the low-income group which spends relatively more on food than the official target group. However, the impact of food was offset by the fact that the price index for shelter was higher for the target group than for the low-income families. This in turn results from the situation in which (a) the price of home ownership has been escalating much faster than that of tenancy (as has been the case consistently between April 1973 and June 1977) and (b) home ownership is more important to the target group than tenancy and vice versa for low-income families.

While the influence of the shelter factor on the comparative behaviour of the all-items series is stable throughout the period under consideration, that of food is not. Three subperiods may be distinguished with respect to the impact of food price movement: April 1973 to June 1975, June 1975 to December 1976, and December 1976 to June 1977. Price indexes for the respective subperiods are presented in the last three lines of Table 2. In the first subperiod, rapidly escalating food prices entirely offset the effect of the shelter factor so that the two all-items indexes were equal at June 1975. In the second subperiod the food price rise was considerably less than that of non-food prices, a fact which complemented the effect of the shelter factor on the low-income series; over this subperiod the all-items series for the official CPI rose 10.7 per cent while that of the low-income families went up only 9.1 per cent. In the third subperiod, rapid food price escalation (over twice that of other prices) caused the all-items series for low-income families to increase 5.5 per cent while the official CPI all-items series rose only 5.0 per cent. Relative to April 1973, then, the third period saw a decrease in the divergence between the two all-items series which had built up in the second subperiod.

The study of the experimental consumer price index for low-income families, as presented above, is interesting and useful both in terms of the global results and the reasons for its divergence from the official CPI. The low-income series should by no means, however, be considered as definitive a measure of consumer price increase for such families as the official CPI is for its covered population. As stated previously, the low-income families' all-items index is a weighted average, at national level, of about 300 component price indexes ("item" price indexes). Although the weights relate specifically to the low-income group as defined, the design of the sample for the 1969 Family Expenditure Surveys from which they were derived was based on the population as a whole. As a result, the margin of error for any subset of that population, such as low-income families, is likely to be greater than that of the overall population. The component price series used to produce the low-income families' series, on the other hand, are actually the series used in the calculation of the *national* CPI, which reflect the regional distribution of the official target group and not necessarily that of low-income families. Furthermore, the actual goods and services for which prices are observed are specified with the overall population in mind and may not be representative of the purchases of low-income families (who likely purchase different commodities in different quantities in different outlets). Also, for some goods and services such as pharmaceuticals or rents, subsidized prices are applicable to low-income families in certain provinces, and their movements may differ from those of the full market prices observed for the official CPI. ■

---

weighted) may only be made for the period from April 1973 forward, since the 1967 weights were introduced as of that date. For the purpose of computing arithmetic averages of price indexes with an April 1973 time base, then, it is proper to use weights expressed in prices of April 1973.

# Observations

## Culture Statistics Book Publishing: An Industry Analysis

With this publication, Statistics Canada inaugurates a series dealing with cultural life in Canada. The data they will present is to be gathered as part of its recently launched Cultural Statistics Programme. This programme has been established with the assistance of several interested groups, chiefly the Research Directorate of the Arts and Culture Branch of the Secretary of State Department, in response to the needs repeatedly expressed for several years by governments and by cultural associations.

The programme will comprise 14 projects as follows:

- book publishing
- book distribution
- newspapers and magazines
- film
- radio and television
- performing arts
- the recording industry
- libraries
- museums and galleries
- other cultural facilities
- artists and performers
- cultural activities of Canadians
- education and the arts
- cultural expenditures.

Some of these subjects have already been the focus of individual surveys for several years, for example, book publishing, performing arts, libraries, museums, and even the cultural activities of Canadians. The others are becoming subjects of new surveys this year.

As can be seen from the above, we wish to achieve as comprehensive a programme as possible, including every important aspect of the cultural life of Canada. We would also like to involve those who will eventually use the collected data in its planning and implementation. The resulting statistics should help their users to quantify the cultural problems that preoccupy them and thus aid them in devising solutions, as well as to measure the effects of their decisions. Finally, the programme is designed not only to furnish data by individual subject, but also to view the cultural life of Canadians from an all-embracing perspective.

To satisfy these disparate goals, two types of publications will be necessary: one that will provide results by individual subject, as soon as its data and analysis become available, and another that will encompass all subjects and deal with the totality of cultural life in Canada.

The first type of publication is the series mentioned above, of which this one is an example. Of the second type there is to be but one a year, namely a publication which will not only collect the results of the 14 projects in a single volume at the end of the year, but also throw light on the significant interrelations between one cultural sector and others and thus offer the reader a global perspective of the cultural life of Canada.

This annual comprehensive publication should see its first issue in the summer of 1978. After a scant year's data collection, it is bound to be somewhat limited, at least in some subjects. In spite of the inevitable lacunae, we believe it beneficial to publish immediately as comprehensive a publication as possible, confident that we can fill in the gaps in subsequent issues.

In summary, we shall have an annual publication beginning in the summer of 1978 dealing with all of the cultural life of Canada. The annual publication will be preceded by a series of publications, each one dealing with an individual cultural aspect.

Additional information can be obtained from Y. Ferland (613-995-9688), Culture Sub-Division, Education, Science and Culture Division, Statistics Canada, Ottawa K1A 0T6.

*Culture Statistics Book Publishing: An Industry Analysis,* 1975 (catalogue 87-601) can be ordered from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. Price: $1.05 ☐

## Provincial Economic Accounts

A second publication of revised and updated *Provincial Economic Accounts* is scheduled to appear later this month. This volume will cover the years, 1961-1976, and will include tables of Provincial Gross Domestic Product and Expenditure at market prices as well as of Government Revenue, Expenditure and Surplus or Deficit by Level of Government. The data will continue to be labeled as "experimental" since the series may in the future be subject to additional methodological and conceptual changes.

The publication of this document brings together the efforts of the Gross National Product Division and other areas of Statistics Canada as well as contributions from numerous provincial government institutions under the general guidance of the Federal-Provincial Committee on Provincial Economic Accounts.

For further information please contact Joel Diena (613-995-0611) Gross National Product Division, Statistics Canada, Ottawa K1A 0T6. ☐

## Estimates of Employees

The Labour Division of Statistics Canada has resumed publishing its monthly report entitled *"Estimates of Employees by Province and Industry"* (Catalogue 72-008) with the issue for September 1977.

The information contained in this report provides a measure of aggregate employment by industry and province. The series are derived by combining results from a monthly census survey of employment in larger firms (employing 20 or more employees) and a monthly sample survey of smaller firms supplemented by data from other sources (described in the Technical Notes of the report).

The monthly publication was suspended following the release of February 1971 data due to operational problems. Monthly data for 1971 to 1974 together with revised historical information from 1961 to 1971 were subsequently published in catalogue number 72-513 and 72-514. Revised and updated data from January 1961 to December 1976 inclusive will be included in an historical publication (Catalogue 72-516) to be issued shortly.

Additional information about the Estimates of Employees can be obtained from Y. Morin (613-992-3868), Monthly Employment and Payrolls Section, Labour Division, Statistics Canada, Ottawa K1A 0V2.

*"Estimates of Employees by Province and Industry"* (Catalogue 72-008, Price $4.00 or 72-516) can be ordered from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. ☐

## Travel, Tourism and Outdoor Recreation, 1975 and 1976

The new edition of *Travel, Tourism and Outdoor Recreation*, (Cat. No. 66-202, price $2.80 in Canada), a 228-page statistical digest covering 1975 and 1976, is now available. With the publication is born a new measuring tool, the Travel Price Index of TPI. Its introduction shows that the costs of travel within Canada have increased recently more sharply than those of the all-items Consumer Price Index.

Contents of the book include: selected influences and personal expenditures on travel and recreation, travel by Canadians, U.S. and overseas visitors, international travel trends, international air travel, the "plant", employment, travel to work and outdoor recreation.

For information, contact Bob Chadwick, Chief, Travel, Tourism and Recreation Section, Education, Science and Culture Division.
Telephone: 613-995-9697.

Copies of *Travel, Tourism and Outdoor Recreation*, (Catalogue No. 66-202) are available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. ☐

## Employment Population Ratio

The January 1978 issue of *The Labour Force* introduced the employment ratio as a new summary measure designed to complement existing measures of overall labour market conditions such as the familiar unemployment and participation rates.

The employment ratio represents the number of employed persons in a given demographic group expressed as a percentage of the corresponding working age population. In short, it shows the proportion of the working age population holding jobs. The demographic characteristics for which the employment ratio can be produced consist of age, sex, marital status, educational attainment and province of residence. Like many other statistics produced by the Labour Force Survey the employment ratio is available as both seasonally adjusted and unadjusted data from 1966 to date. (The January 1978 issue of *The Labour Force* contains an article analysing the time series behaviour of the employment ratio).

For further information about this series contact Fred Wong (613-996-4563) or Henry Pold (613-996-4150) Labour Force Survey Division, Statistics Canada, Ottawa K1A 0T6.

Copies of *The Labour Force*, January 1978 (Catalogue 71-001, Price: 55 cents) and *Historical Labour Force Statistics – Actual Data, Seasonal Factors, Seasonally Adjusted Data*, 1977 (Catalogue 71-201, Price: $2.10) are available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. □

## Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

## Table 1: Population[1], by province (thousands)

| Year and quarter | | Canada | Nfld | P.E.I | N.S | N.B | Que | Ont | Man | Sask | Alta | B.C | Yukon | N.W.T |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| D | | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 1 |
| 1976 | June | 22,992.6 | 557.7 | 118.2 | 828.6 | 677.3 | 6,234.5 | 8,264.5 | 1,021.5 | 921.3 | 1,838.0 | 2,466.6 | 21.8 | 42 |

---

The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided y the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue umber 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does ot include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending enter the labour force.

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer cost on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1

---

The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant ollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts hich occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based n seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and pping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2]Includes Prince Edward Is-d and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3]Due to postal strike the mail sample was reduced. These estimates uld be used with caution due to their reduced reliability.

---

In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a esult of a work stoppage, is not included. [2] The industry groups from January 1973 forward are based on the 1970 Standard Industrial Classification. [3] The number of an-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made r establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 3 workers; however, the total includes all work toppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these indusies, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes publishing and llied industries. [6] Includes storage and communication industries.

---

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

---

[1] See footnote 1 and source in Table 11. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 10. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing
[4] Except machinery and transportation equipment industries.

Table 13 Average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification (dollars)

| Year and month | Industrial composite | Forestry | Mining, including milling | Manufacturing | | | Construction | Transportation, communication and other utilities | Trade | | Finance, insurance and real estate | Service |

---

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements.

## Section 6 · Manufacturing

70 1. Total Inventories, Shipments and Orders in Manufacturing
71 2. Manufacturing Shipments by Industry
73 3. Manufacturing Inventories by Industry
75 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
76 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
77 6. Estimated Value of Goods in Process and Finished Products by Economic Use Classification
78 7. Tobacco and Beverages
78 8. Rubber
79 9. Rubber Products
79 10. Raw Hides, Skins and Finished Leather
80 11. Footwear Production
81 12. Production of Sawn Lumber
81 13. Pulpwood, Wood Pulp and Newsprint
82 14. Primary Iron and Steel
83 15. New Motor Vehicles
84 16. Refrigerators, Freezers, Washing Machines and Clothes Dryers
84 17. Radio and Television Receiving Sets

### Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

| Annual average or month | Shipments[1] | New orders received during month[2] | Unfilled orders at end of month | Owned[3] | Held but not owned | Inventory at end of month: All inventory held: Total | Raw materials | Goods in process | Finished products | Ratio inventor owne to shipment |
|---|---|---|---|---|---|---|---|---|---|---|
| [illegible] | 310000 | 310060 | 310106 | 310336 | 310382 | 310152 | 310198 | 310244 | 310290 | 3105 |

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in la intermittent shipments, for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, n of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by man facturers including warehouse stocks. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in lar intermittent shipments, for these a monthly estimate of work put in place has been estimated. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

---

[1] Because the supplementary classification for automative products consist of industries which are also included in the appropriate economic use group this series is inclusive of those aggregated for the Canada total. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 5. Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

| Annual average and month | Inventories owned | | | | | | | Inventories held raw materials | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Consumer goods | | Machinery and equipment | Construction materials and components | Other intermediate goods & supplies | Export-based industries | Supplementary classification automotive products | Consumer goods | | Machinery and equipment | Construction materials and components | Other intermediate goods and supplies | Export based industries | Supplementary classification automotive products |

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Exports by Commodities (65-004), Imports by Commodities (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

lote: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on ne previous years' operations and may change when the current annual totals for all firms are known the following year. [2] The above table covers all sales to users and ncludes sales by manufacturers through their dealers and agents as well as the sales of importers made directly to users. Even though sales are to users, i.e. farmers, values are stated at the dealer's net buying price or at wholesale price.

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities an productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood pudding etc. [6] Includes solid, coated, bulk, packages and novelties.

Note Components may not add to totals because of rounding

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of reta purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Imports by Commodities (65-007), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series

---

Note: Components may not add to totals because rounding. [1]This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2]Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: Department of Finance.**

## Table 12: Budgetary expenditures by principal classes[1] (millions dollars)

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Summary Reference Index* (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

*CANSIM Main Base Series Directory* (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

*CANSIM Mini Base Series Directory* (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD it is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field

R.E. Drover – Director, User Advisory Services Division

B.J. Lynch – Director, Prices Division

R. Platek – Director, Household Surveys Development Division

J.R. Podoluk – Director General, Household Statistics Branch

J. Randall – Director, Financial Flows and Multinational Enterprises Division

L.O. Stone – Senior Advisor, Population Studies and Statistics, Census

P.N. Triandafillou – Director, Current Economic Analysis Division

J.S. Wells – Director General, System of National Accounts (Current) Branch

M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch

N. Cholette – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 5, Table 5 – Construction Price Indexes

A new series the 14 city composite index has been introduced with this issue.

Section 6, Table 14 – Primary iron and steel

A new listing of major steel consumers was prepared with a view to updating the concepts and to establishing more homogeneous groupings.

The data will reflect these changes with this issue.

Section 13, Table 4 – Cheques cashed in clearing centres

The seasonally adjusted series for personal chequing has been reactivated with this issue.

# Cinema Attendance Habits in Canada

Yvon Ferland and Audrey Voitkus[*]

Since its popularity peak during the hey-day of the Hollywood phenomenon, cinema attending as a leisure-time activity has declined the world over. It was found during a 1975 survey[1] that in Canada an average of only 16 per cent of all available cinema theatre seats were filled. Per capita expenditure on cinema attendance ranged from $4.03 in Newfoundland to $12.44 in British Columbia.[2]

To focus briefly on some of the variables that influenced cinema attendance as a pastime, and to relate the habit to selected other leisure-time habits is the two-fold purpose of this article.

The information on which the statistics below are taken is derived largely from a survey of approximately 30,000 Canadians, aged 14 years and over, randomly selected from all parts of the country except the North West Territories and the Yukon. The survey covered a number of leisure-hour activities in which Canadians engaged during two separate periods: July and August, and September and October.[3] In this paper we used only the July and August data. A supplementary source of information was the Statistics Canada publication, *Motion Picture Theatres and Film Distributors 1975* (Cat. No. 63-207).

Cinema attenders were identified by their answers to the question whether they had attended a film shown by a commercial cinema or drive-in during the specified time period. The frequency of their attendance was expressed in number of times per two-month period. We are thus able to draw up a table showing the average frequency rate of cinema attendance for all Canadians aged 14 years and over. The frequency is expressed in times per month, and is broken down by province in the first column of Table I below.

Table I

| | Average Times per Month all Canadians 14 and Over Attended Cinema in July/August | Percentage of Total Population Who Said They Attended Cinema July/August | Times Per Month Cinema Attenders only Attended | Percentage* of Seating Capacity Utilization | Number of Persons per Theatre |
|---|---|---|---|---|---|
| Nfld. | .56 | 36.7 | 1.54 | 17 | 24,977 |
| P.E.I. | 1.02 | 56.8 | 1.79 | 32 | 8,483 |
| N.S. | .67 | 45.5 | 1.47 | 14 | 15,513 |
| N.B. | .90 | 51.2 | 1.76 | 17 | 13,233 |
| Qué. | .63 | 47.6 | 1.32 | 13 | 16,370 |
| Ont. | .73 | 51.6 | 1.42 | 16 | 20,984 |
| Man. | .64 | 45.7 | 1.40 | 16 | 11,576 |
| Sask. | .78 | 48.8 | 1.60 | 17 | 6,653 |

[*] Yvon Ferland is Assistant Director Cultural Sub-division and Audrey Voitkus was formerly Writer Researcher, Cultural Sub-division, Education, Science and Culture Division.

[1] The Merchandising and Services survey on regular motion-picture theatres, drive-in theatres, and film distributors in Canada

[2] $13.37 in the Yukon and North West Territories, which are excluded from the purview of this paper.

[3] This survey was conducted as a supplement to the monthly labour force survey.

When frequency of attendance is calculated for the whole population aged 14 years and over, the rates vary by as much as 82 per cent from province to province.

These differences may stem from either the numbers who attended the cinema in the several provinces, or the relative frequency with which they attended, or both.

The second column of Table I shows the percentages of the provincial populations, aged 14 years and over, who said they attended motion pictures as a leisure-time activity. All others were considered to be non-attenders. Provincial disparities in terms of percentages of attenders vary with provincial average attendance rates. This indicates that the relative numbers of cinema attenders in each province play a significant role in achieving a high or a low provincial rate.

The frequency rates shown in the third column throw light on the effect non-attenders have on the provincial averages of the first column. With the non-attenders eliminated, average rates are spread over a much reduced spectrum. Whereas the spread among the rates obtained by dividing attendance per month by the whole population was 82 per cent, now it is only 36 per cent.

Still, 36 per cent is significant difference. It appears, then, that both factors, the size of the attending population and its respective attendance rate influence the provincial average.

The fourth column shows the percentages of available theatre seats occupied in each province.

Prince Edward Island, with the highest percentage of cinema attenders whose attendance rate was also the highest, achieved a seating capacity utilization twice the national average. New Brunswick, on the other hand, with almost as high an attendance rate among its cinema attenders, but with 5.6 per cent fewer of them than in Prince Edward Island, attained a seating capacity utilization only one percentage point higher than the national average, or, a scant 6 per cent improvement on it.

In Quebec, where the cinema attending population was 2.5 percentage points lower than the national average, and the rate of attendance was 6 per cent lower, the seating capacity utilization was a significant 23 per cent lower than the national average. Newfoundland, on the other hand, where only a little over a third of the population claimed to be cinema attenders (13.4 percentage points below the national average), but with an above-average attendance rate among devotees, yet exceeded, like New Brunswick, the national average of seating capacity utilization by one percentage point.

Although both factors play a significant part, the relative size of the cinema-attending population in the province appears, in general, to have had a greater effect on filling the available theatre seats than did the attendance rate of devotees. In order to determine whether this was in fact so, however, we would require statistics on the number of theatres available relative to the size of the population, miles of road available and required to be travelled in order to get to theatres, and data on other forms of entertainment competing for the motion picture dollar.

Before turning to the next variable, a comment on the reliability of our data is required. According to the Survey of Motion Picture Theatres, 1975, carried out by the Merchandising and Services Division at Statistics Canada, the average monthly paid admissions at regular theatres would be 7,013,417 (84,161,000 for the year). If the yearly paid admissions figure at drive-in theatres (12,843,000) is divided by three, on the assumption that drive-ins operate for three months of the year, a monthly average of 4,281,000 is obtained for July and August. The two monthly averages, regular and drive-in, give an average of 11, 294,417 for summer month admissions. When this figure is divided by the total Canadian population (excluding the Northwest Territories and the Yukon), aged 14 years and older at June 1, 1975, or 16,937,927, we would obtain the average times per month that the total population attended cinemas according to the Survey of Motion Picture Theatres, which works out to 0.67. In our sample survey respondents reported an attendance rate only slightly higher, 0.70. Thus the ticket sales indicate that our respondents have given us answers on which we can rely.

The last column of Table 1 shows the ratio of provincial and national population per motion picture theatre.[4] It shows that simple availability bore very little relationship to either rates of attendance or to seating capacity utilization. Evidently other factors were involved.

Besides differences in average cinema attendance rates from one province to another, there may be similar differences due to factors other than geography. The next four tables will consider, in turn, to what extent age, mother tongue, sex and type of occupation incluenced attendance rates.

---

[4] Taken from the Survey of Motion Picture Theatres. Drive-ins have been included in the calculations. However, the fact that certain houses have two or more auditoria was not taken into consideration.

Table II deals with the factor of age. The first column shows that on the average young people (aged 14-24) attended cinemas twelve times as often as those over 65 years. From the first column it would appear that frequency of attendance varies inversely with age.

The second column shows that the older the group the fewer of its members were cinema attenders. Differences in the attendance rates of groups were due largely to the number of attenders in the group.

Average times of attendance per month among the devotees only in each group, as given in the third column, varied quite considerably from group to group. The group of attenders aged 14-24 attended 43 per cent more frequently than the group aged 25-44 and 68 per cent more often than those over 65. The age group 45-64 attended least often, even 5 per cent less than the oldest group.

The average attendance rate for their respective total group populations were thus somewhat influenced by the regularity with which those who attended did so.

In summary, rates of attendance varied from age group to age group. These variations were due both to differences in the proportions of cinema attenders that the groups contained in their numbers and to the actual frequency of attendance by the attenders. Young people both went in larger numbers and went more often than any of the older groups.

The outlook for the future, however, appears problematic. Let us consider briefly Table III.

Table II

| Age groups | Average times per month that the total population attended cinemas | Percentage of group who were cinema attenders | Average times per month that attenders went to cinema |
|---|---|---|---|
| 14-24 | 1.35 | 78.1 | 1.73 |
| 25-44 | .69 | 56.5 | 1.21 |
| 45-64 | .26 | 26.0 | .98 |
| 65 & over | .11 | 10.3 | 1.03 |
| Total | .70 | 50.1 | 1.40 |

* Assuming static participation rates.

** Projected population figures provided by Projections Section, Education, Science, and Culture Division.

Assuming a steady minimal increase in the total Canadian population, and the continuation of existing trends, the groups 25 years and older would steadily grow in numbers. The youngest group, however, after peaking in 1980, would diminish. Since the total population 14 years and older would be growing, so would the total cinema attending population. The problem lies in the different rates at which the two trends would be progressing unless changes occur in Canadians' cinema attendance habits.

In 1975, 78.1 per cent of the age group 14-24 were cinema attenders, as were 56.5 per cent of those aged 25-44, 26 per cent of those aged 45-64, and 10.3 per cent of those 65 years and older. If the age-groups were to be attending the cinema in similar proportions in future years, they would be attending in the numbers given in the even-numbered columns of Table III. That is, the groups of cinema attenders 25 years and older would grow steadily. The group 14-24 would increase in 1980, but diminish thereafter. As stated above, the total cinema attending population would grow as the population grows. However, while the total Canadian population aged 14 years and older would have increased by 28 per cent between 1975 and 1990, the total number of cinema attenders would have increased by only 20 per cent. The difference would be due largely to the decreasing numbers of 14-24 year-olds, from whom more than three quarters of the total cinema attending population was drawn in 1975.

Table IV portrays the variations in cinema attendance habits relative to mother tongue and sex. Respondents have been grouped into three categories, those whose mother tongue is English, those whose mother tongue is French and those whose mother tongue is neither of the two official languages. Due to the small number in the sub-categories within the third grouping, it is not possible to furnish meaningful data on individual mother-tongue languages other than English and French.

The first set of columns clearly shows that mother tongue incluenced attendance rate. The average attendance rate for Anglophones was 22 per cent higher than for Francophones and 47 per cent higher than for the "other" category.

The number of Anglophones who attended the cinema regularly was 17 per cent higher than that of the corresponding group of Francophones, and 40 per cent higher than the number of cinema attenders in the "other" language category. Also, Anglophone cinema attenders attended 6 per cent more frequently than Francophone attenders, and 8 per cent more frequently than attenders whose mother-tongue is classified as "other". Again, both factors – the number of attenders and the frequency of their attendance – together determined the total group average, the first factor playing a heavier role.

The table also shows the differences between males and females. In all three groups male cinema attenders attended more frequently than females. Whereas among Anglophone "regulars" females attended only 4 per cent less often than their male counterparts, among Francophones the difference tripled to 12 per cent, and among the Other language group devotees males attended 11 per cent more frequently.

When the total population was considered, the difference according to sex increased considerably for all groups.

Table IV

| Mother tongue language | Average Times per Month the whole Group went to the Cinema July/August | | | Percentage of Group who were Cinema Attenders | Times per Month Attenders went to the Cinema | | |
|---|---|---|---|---|---|---|---|
| | M. | F. | T. | T. | M. | F. | T. |
| English | .84 | .74 | .79 | 54.6 | 1.47 | 1.41 | 1.44 |
| French | .69 | .58 | .63 | 46.8 | 1.43 | 1.28 | 1.36 |
| Other | .57 | .47 | .52 | 38.9 | 1.40 | 1.26 | 1.33 |
| Total | .76 | .65 | .70 | 50.1 | 1.45 | 1.36 | 1.40 |

Table V

| Occupation | Percentage of all Cinema Attenders Occupation Group Comprised* | Average Times per Month Total Group went To the Cinema | Percentage of Group who were Cinema Attenders | Average Times per Month Cinema Attenders Went to the Cinema |
|---|---|---|---|---|
| White Collar & Service | 22 | .81 | 58.3 | 1.39 |
| Student | 20 | 1.32 | 76.5 | 1.72 |
| Homemaker | 17 | .38 | 34.1 | 1.10 |
| Blue Collar & Craftsmen | 14 | .73 | 50.2 | 1.45 |
| Professional, Artistic, Paraprofessional, Technical | 10 | .85 | 64.4 | 1.32 |
| Resource Industry Workers | 6 | .59 | 43.1 | 1.37 |
| Unemployed | 4 | .98 | 60.6 | 1.61 |
| Managerial & Administrative | 4 | .76 | 62.5 | 1.22 |
| Retired & Other | 2 | .18 | 14.7 | 1.25 |
| Total | 99* | 0.70 | 50.1 | 1.40 |

* Due to rounding.

It would be interesting to know what caused these differences. There was an overall difference of 17 per cent between male and female attendance. Was it because males feel that they have more spending money, more time, or a higher degree of interest in films? Then again, is the greater span (21 per cent) between "other" language males and "other" language females than between either their Anglophone (14 per cent) or Francophone (19 per cent) counterparts due to the fact that the majority of available films are in English or in French, and that the "other" language women speak these official languages less well than the males, or to some other factor?

Besides geography, age, sex, and mother tongue, occupation influenced Canadian cinema attending habits. Table V lists them in rank order according to what percentage of the total Canadian cinema attending public they comprised.

There were quite surprising differences in the cinema attending habits of the various occupations. On the average, students went 35 per cent more often than the next highest group, the unemployed, and more than seven times as often as retired persons. When only regular attenders in each group are considered, however, the difference between students and unemployed is reduced to 7 per cent, and the advantage of student over retired to a fraction, two fifths.

It is interesting to note that only two fifths of all Canadian housewives attended movies regularly, and that the average attendance of those among them who attended was 27 per cent below the national average.

Although there was 56 per cent spread in the attendance rates among the regulars of all the occupational groups, the range is actually quite a narrow one: no occupational group went less frequently than once a month, and none attained a frequency of twice a month.

In general, geographic location influenced cinema attendance moderately, age significantly, mother-tongue somewhat, and occupation a great deal indeed.

Having examined four possible variables that influenced cinema attending habits, we shall now turn to a brief look at whether attenders differed from non-attenders with respect to participation in other cultural activities.

Table VI lists a series of leisure-time activities generally pursued in people's homes, with one exception, that of taking lessons or courses. It shows what percentage of regular cinema attenders, moderate attenders, and non-atenders claimed to engage in each of the other pastimes, and it gives the average number of minutes per day that the whole group (i.e. regulars, moderates, abstainers) spent at the given activities.

The table shows that those persons who went to the cinema often, engaged in other cultural activities a great deal. Those who attended the cinema moderately, pursued the other selected activities to a lesser extent than avid attenders, but to a greater extent than abstainers, except for reading newspapers, to which the moderates allotted the least amount of time.

All three groups ranked watching television first and listening to radio second with respect to average time spent at the activity. Also, the largest percentage in all three groups engaged in watching television, and the second largest in listening to the radio.

Records, newspapers, and magazines took third, fourth, and fifth place in terms of percentages of those who engaged in their appreciation or perusal.

Books placed sixth in terms of percentages of readers in every group, and fourth in terms of time spent reading.

Hobbies were the seventh most popular pastime in all three groups in terms of numbers who engaged in them.

Magazines placed seventh for all three in terms of reading time.

Painting, sculpting, playing an instrument, handicrafts, and taking lessons or courses as a leisure-time pursuit were chosen by a small proportion of all three groups, and pursued, on the average, for negligible time periods.

Both frequent cinema attenders and total abstainers watched television in larger numbers for more minutes a day on the average than either group listened to the radio.

Table VI

| | Said They Attended Cinema 4 Times Per Month or More (12%) | | Said They Attended Cinema 3 Times Per Month or Less (38%) | | Said They Did Not Attend Cinema (50%) | |
|---|---|---|---|---|---|---|
| Activity | Percent of Group who Engaged in Activity | Av. Min/Day For all in Group | Percent of Group who Engaged in Activity | Av. Min/Day For all in Group | Percent of Group who Engaged in Activity | Av. Min/Day For all in Group |
| Watching Television | 96 | 119 | 96 | 97 | 91 | 95 |
| Listening to Radio | 89 | 89 | 86 | 66 | 79 | 61 |
| Listening to Records, Tapes | 83 | 75 | 74 | 42 | 47 | 23 |
| Reading Newspaper | 76 | 35 | 79 | 33 | 71 | 34 |
| Reading Magazines | 69 | 29 | 66 | 23 | 47 | 18 |
| Reading Books | 65 | 45 | 63 | 39 | 42 | 27 |
| Engaging in Hobbies | 43 | 36 | 39 | 28 | 25 | 22 |
| Engaging in Art: Sculpture, Painting, Drawing, Film, Photography | 22 | 10 | 17 | 6 | 7 | 3 |
| Playing Musical Instrument | 17 | 10 | 14 | 8 | 8 | 4 |
| Engaging in Handicrafts | 16 | 9 | 17 | 10 | 12 | 8 |
| Taking Courses or Lessons | 5 | 5 | 4 | 3 | 1 | 1 |

However, when it came to listening to records and tapes as a leisure activity, there was a sharp drop-off rate among the abstainers, 69 per cent fewer abstainers listening to records and tapes than listened to the radio, compared to only 7 per cent fewer frequent cinema attenders listening to records and tapes than listened to the radio. The average time spent in listening to records and tapes dropped even more sharply: 165 per cent in the case of abstainers, compared to 20 per cent among frequent cinema attenders.

Slightly larger numbers of "moderates" read newspapers than either extreme.

All Canadians, irrespective of their cinema attending habits, read newspapers a little over a half-hour daily, magazines twenty minutes to half an hour, and books half an hour to three quarters of an hour. Also, everyone spent more time reading books than magazines, irrespective of his cinema attending proclivities.

Although fewer people in each of the three categories engaged in hobbies than read either magazines or books, they spent more time at the hobby than they did reading magazines but less than at reading books.

However, by comparing the times listed in Table VI with those in Table VII, a different picture emerges. It appears that those persons who engaged in the cultural activities, did it to quite a considerable extent. In other words, the low average times of Table VI are largely due to the small number of persons engaging in the selected activities.

Almost half of all Canadians did not attend the cinema in July and August, 1975. 71.2 per cent of this group were newspaper readers, compared to only 46.8 per cent magazine readers. In order to attract the attention of the "uninitiated", a newspaper advertisement would thus appear to have a 52 per cent better chance of accomplishing the task.

Among those who already attended the cinema, only 10 per cent fewer read magazines than newspapers. In order to make them choose one film over another, or to entice them to increase their attendance, then, the advertising medium would appear to be less critical. Of course, other factors would play a part.

Table VII

| Selected Cultural Activity | Average Minutes Per Day Spent on Cultural Activity By Those only Who Engaged in Selected Activity and said They Attended Cinema 4 Times a Month or More | Average Minutes Per Day Spent on Cultural Activity By Those only Who Engaged in Selected Activity and said They did not Attend the Cinema |
|---|---|---|
| Watching Television | 124 | 104 |
| Listening to Radio | 101 | 78 |
| Listening to Records and Tapes | 89 | 50 |
| Reading Newspapers | 46 | 48 |
| Reading Magazines | 42 | 39 |
| Reading Books | 69 | 64 |
| Engaging in Hobbies | 84 | 86 |
| Engaging in Art | 47 | 40 |
| Playing Musical Instrument | 59 | 49 |
| Engaging in Handicrafts | 58 | 68 |
| Taking Lessons or Courses as a Leisure Activity | 112 | 92 |

A definite pattern, or two group profiles emerge, when only participants in the selected activites are segregated and average times compared. Table VII compares avid cinema attenders who also engaged in other cultural activities to abstainers who did the same, with the moderates left out.

Avid cinema attenders who engaged in other cultural activities spent more time at all but three activities than their abstainer counterparts.

They spent very slightly less time reading newspapers but, perhaps to compensate for it, slightly longer reading magazines, as well as nine per cent longer reading books.

Hobbies attracted 2 per cent less time, and handicrafts 17 per cent less from avid cinema attenders than from abstainers. However, cinema attenders devoted 19 per cent more time on the specifically named artistic pursuits: sculpture, painting and drawing, film, photography. It may be that one group tended to call hobbies and handicrafts what the other considered serious art since crafts and hobbies were not defined in the survey from which these statistics were obtained. Of course, this is a speculation.

Avid cinema attenders spent 19 per cent longer watching television than abstainers, 29 per cent longer listening to the radio, 80 per cent longer listening to records and tapes, and 21 per cent longer playing a musical instrument. Cinema attenders devoted 22 per cent more time taking lessons than the lesson-takers in the abstainer group.

Table VIII illustrates the differences among avid cinema attenders, moderates, and abstainers with

Table VIII

respect to their rates of attending cultural institutions and performances other than the cinema or other cultural events.

The highest proportions of attenders of cultural institutions, performances, and events were in all cases drawn from the 12 per cent group of the most regular cinema attenders. The group that did not attend the cinema had the fewest representatives at the other events, and the moderates a percentage that always fell between the extremes.

Similarly, the most regular cinema attenders comprised the group that went most often to other cultural places and occasions, from zoos to ballets. The moderates were moderate in every respect, and the abstainers participated least.

Among Canadians there appears to be a direct correlation between the tendency to go to the cinema and a penchant for other cultural activities. Further studies would be necessary to probe for the reasons behind this phenomenon, as well as to look into the possibly multi-faceted question, how do those people who do not go to the cinema spend their leisure time, only a minimum of which appears to be allocated to cultural activities.

Since only half of all Canadians attended the cinema in 1975, and since of those who did, only a third attended with any sort of regularity, the prospects for increasing cinema attendance would appear to be in both areas: in increasing the rate of attendance of the "lukewarm" contingent, as well as in drawing in the abstainers.

In this regard, it should be instructive to know the reasons for the choice by the cinema attender of one film over another, and his reason for attending a cinema instead of another event. It should be possible to study these and other similar questions in a few years within the recently undertaken cultural statistics program at Statistics Canada.[5]

The present study indicates that interest in one cultural activity coincides with a relatively strong interest in others. The Department of the Secretary of State has published *A Leisure Time Study – Canada 1975*, a more detailed analysis of all the results of the survey from which the above data relevant to cinema attendance were drawn. ■

# Observations

## Inter-corporate Ownership, 1975

The corporate ownership framework of the Canadian economy is continuously changing. Amalgamations, acquisitions and mergers of a significant nature continue to occur both in Canada and abroad. These events affect both industrial and aggregate concentration, foreign control and, consequently, the structure of the socio-economic system.

These developments are paralleled by government efforts to analyse and evaluate the impact of foreign investments in Canada and the influence of corporate concentration on the Canadian economy. In December of 1973, the Foreign Investment Review Agency (FIRA) was established to monitor and approve all significant direct and indirect foreign investments in Canada. In April of 1975 the Royal Commission on Corporate Concentration (Bryce Commission) commenced its inquiry into the extent and impact of major concentrations of corporate power on the Canadian socio-economic system. In March of 1977 the government introduced the second phase of amendments to the federal Combines Investigation Act setting out rules covering mergers, monopolies and interlocking directorships. All these recent events, in conjunction with the expanding published data on foreign control and concentration, have increased the public interest and demand for information with respect to the ownership structure of the Canadian corporate system.

In response to increasing ownership information requests from many segments of Canadian society, this latest directory has been prepared. This Inter-corporate Ownership publication (ICO) is a reliable index of who owns and/or controls whom in Canada. It is intended to serve as an essential reference tool for corporate executives, bankers, financiers, marketing managers, investors, researchers and the general public, all of whom desire detailed information on the corporate structure of Canadian society.

The information contained in this directory is based primarily upon non-confidential returns filed by Canadian corporations under the Corporations and Labour Unions Returns Act (CALURA). However, extensive research has made possible a number of improvements in the 1975 ICO and it differs from previous editions (the most recent being 1972; Catalogue 61-513) in several important aspects. Using such international publications as *Moody's, Jane's, Who Owns Whom and Standard and Poors'*, information on ultimate foreign patent corporations has been obtained. In many cases, researchers have combined apparently unrelated enterprises operating from a number of foreign countries into one multinational enterprise. Wherever possible, researchers have searched and carefully examined the existence of any options, insider holdings, convertible shares and interlocking directorates, which would affect the control of a corporation. In a number of cases, reported nominees have been replaced by true owners. Information on certain family controlled corporations is included so that privately owned corporations may appear as an integral part of an enterprise. In all these cases, a series of special notes has been prepared documenting the reasons for assigning control. Much of this research has resulted in expanded enterprise structures, spanning several countries and leading to new insights into the organization of multinational enterprises operating in Canada.

For the first time, the ICO is a two-volume publication. In the first volume is an alphabetical index of all corporations having inter-corporate relationships. For each corporation, a group-complex-enterprise code and page number is shown. This provides the principal location of the corporation in the second volume which is divided into two parts.

*Volume I also includes the "Guide to Inter-corporate Ownership" section. It contains all the underlying concepts, Special Notes and instructions. Understanding this section is fundamental in using the ICO to its full potential.*

Finally, the first volume contains a limited series of inter-corporate maps. They show some of the more complex and diverse ownership structures in the

Canadian economy. They were produced from the information contained in the second volume.

In the second volume, comprised of Parts 1 and 2, relationships between the corporations mentioned in the index and accompanying data are presented.

At the time of publication two new services are being developed. The first of these services makes available machine readable versions of the information on ownership contained in this publication. From the information contained in this publication, it is possible to develop an inter-corporate map. This is a diagram representing the relationships between corporations in a group, or complex, or enterprise. Such diagrams may be prepared upon request.

The two services are available on a cost recovery basis and interested readers are invited to contact Statistics Canada by writing to: Mr. Peter Blitt (613-996-7888), Chief Corporations Section, Business Finance Division, Statistics Canada, Ottawa, Ontario K1A 0T6.

Copies of *Inter-corporate Ownership, 1975* can be obtained from Publications Distribution, Statistics Canada, Ottawa, Ontario K1A 0T6. Price: $36.00 ☐

## A Handbook on Social Security in the 1970s

*Social Security, National Programs, 1978* provides a current look at the coverage, benefits, funding and statistics of social security programs, nationally, provincially and by regions.

A new section analyses historical trends in the population and looks ahead to the year 2031. A dramatic shift in the age mix of Canada is shown in the making.

Major uses of the 770-page study may be in personnel management, pension plannning, actuarial work, labour negotiations, policy formulation, program planning and evaluation, provision of government program information and even social studies projects.

*Social Security, National Programs, 1978* (Catalogue No. 86-201) can be obtained from Publications Distribution, Statistics Canada, Ottawa, Ontario K1A 0T6. Price: $8.25

For further information, contact H. Mimoto (613-995-0871), Chief, Social Security Statistics, Statistics Canada, Ottawa K1A 0T6. ☐

## Human Activity and the Environment

The impact of human activity on the environment and natural resources is emerging as one of the major concerns of the latter half of the twentieth century. Statistics Canada has prepared a statistical profile of certain aspects of human activities that have been considered in terms of potential stressors on the environment. These statistics were compiled from the bureau's existing data base, and thus focus on activities rather than the resulting "quality of the environment". *Human Activity and the Environment* is directed at those who have a general interest in trends and spatial distribution of major environmental impact activities. In the process of preparing the publication, it became evident that the traditional statistical classifications and concepts were poorly suited for environmental analysis. Thus, many of the data were reorganized to draw out the environmental dimensions.

This publication, for example, displays for the first time census data by watershed and manufacturing data by high, medium and low (environmental) stressor activity. It carefully selects from the massive data base the kinds of statistics that are useful for analysis and understanding of environmental trends. While some of the data are a recast of familiar statistical series, others are new and have not been published elsewhere.

Each chapter contains a brief introductory text highlighting environmental issues and providing technical explanations where required. The statistics are presented in the form of tables, charts, and maps. Where possible, the time series are extended sufficiently back in time to capture long-term trends.

Additional information on this publication can be obtained from Mr. A.M. Friend (613-992-4571), Office of the Senior Advisor on Integration, Statistics Canada, Ottawa, Ontario K1A 0T6.

*Human Activity and the Environment* (Catalogue No. 11-509, $2.80 in Canada, $3.40 elsewhere) is available from Publications Distribution, Statistics Canada, Ottawa, Ontario K1A 0T6. ☐

# Section 2 · Population Statistics

4 1. Population by Province
4 2. Immigration to Canada, by Country of Last Permanent Residence
5 3. Immigration to Canada, by Province of (Intended) Destination
5 4. Immigration to Canada, by (Intended) Occupational Group
6 5. Births, by Province
6 6. Deaths, by Province
6 7. Marriages, by Province

## Table 1: Population[1], by province (thousands)

| Year and quarter | Canada | Nfld. | P.E.I. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Yukon | N.W.T. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

---

The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided y the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue lumber 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does ot include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending enter the labour force

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation)

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission

---

[1] Vacancies for full-time, casual, part-time, seasonal and temporary jobs which were immediately available. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups from January 1973 forward are based on the 1970 Standard Industrial Classification. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 3 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

---

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service.

---

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 11. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 10. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.
[4] Except machinery and transportation equipment industries.

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

---

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements

## Section 6 · Manufacturing

70 1. Total Inventories, Shipments and Orders in Manufacturing
71 2. Manufacturing Shipments by Industry
73 3. Manufacturing Inventories by Industry
75 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
76 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
77 6. Estimated Value of Goods in Process and Finished Products by Economic Use Classification
78 7. Tobacco and Beverages
78 8. Rubber
79 9. Rubber Products
79 10. Raw Hides, Skins and Finished Leather
80 11. Footwear Production
81 12. Production of Sawn Lumber
81 13. Pulpwood, Wood Pulp and Newsprint
82 14. Primary Iron and Steel
83 15. New Motor Vehicles
84 16. Refrigerators, Freezers, Washing Machines and Clothes Dryers
84 17. Radio and Television Receiving Sets

## Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

| | | | | Inventory at end of month | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | All inventory held | | | | |
| Annual average and month | Shipments[1] | New orders received during month[2] | Unfilled orders at end of month | Owned[3] | Held but not owned | Total | Raw materials | Goods in process | Finished products | Ratio of inventories owned to shipments |
| D | 310000 | 310060 | 310106 | 310336 | 310382 | 310152 | 310198 | 310244 | 310290 | 310530 |
| D | 310030 | 310083 | 310129 | 310359 | 310389 | 310175 | 310221 | 310267 | 310313 | 310531 |

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments, for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. Note As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

---

[1] Because the supplementary classification for automative products consist of industries which are also included in the appropriate economic use group this series is inclusive of those aggregated for the Canada total. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

## Table 5. Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

| Annual average and month | Inventories owned | | | | | | | Inventories held raw materials | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Consumer goods | | | | | | | Consumer goods | | | | | | |
| | Non-durable | Durable | Machinery and equipment | Construction materials and components | Other intermediate goods & supplies | Export-based industries | Supplementary classification automotive products | Non-durable | Durable | Machinery and equipment | Construction materials and components | Other intermediate goods and supplies | Export based industries | Supplementary classification automotive products |

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distrubution code

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

---

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] The above table covers all sales to users and includes sales by manufacturers through their dealers and agents as well as the sales of importers made directly to users. Even though sales are to users, i.e. farmers, values are stated at the dealer's net buying price or at wholesale price.

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Exports include sea and freshwater fish and shellfish products by exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [3] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood pudding etc. [6] Includes solid, coated, bulk, packages and novelties.

Note: Components may not add to totals due to rounding and partial revisions. [1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Not available on a monthly basis. [4] Includes loans to finance companies which are affiliates of retail merchandisers. [5] Religious, educational, health and welfare institutions. [6] Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies.

Note Components may not add to totals because of rounding

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Imports by Commodities (65-007), Statistics Canada.**

## Section 12 · Transportation

122 1. Carloadings of Revenue Freight
123 2. Operating Statistics of Canadian Railways
123 3. Operating Statistics of Air Carriers in Canada
124 4. Operating Statistics of Canadian Pipelines
124 5. Shipping Traffic

# Table 1: Carloadings of revenue freight on Canadian railways[1] (thousand cars)

| Year and month | Total railway revenue freight loadings (carload and non-carload) ('000 tons) unadj | Total railway revenue freight loadings (carload and non-carload) ('000 tons) S A | Total revenue cars loaded (carload only) | Farm products and food: Wheat | Farm products and food: Other grain and grain products | Farm products and food: Fresh fruits and vegetables | Farm products and food: Other agriculture products | Farm products and food: Animals and their products | Farm products and food: Prepared food products | Mine products: Iron ore and concentrates | Mine products: Other metal ores and concentrates | Mine products: Potash | Mine products: Coal, sand, cement and other mine products |

---

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series

---

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted.

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: Department of Finance.**

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in each column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data are available can be found in the following:

*CANSIM Summary Reference Index* (Annual with periodic amendments) – Free on request.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

*CANSIM Main Base Series Directory* (Annual with periodic amendments) – $30.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

*CANSIM Mini Base Series Directory* (Annual with periodic amendments) – $10.

This Directory is a detailed guide to the data on the CANSIM Mini Base – a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) – Assistant Chief Statistician, Economic Accounts and Integration Field
R.E. Drover – Director, User Advisory Services Division
B.J. Lynch – Director, Prices Division
R. Platek – Director, Household Surveys Development Division
J.R. Podoluk – Director General, Household Statistics Branch
J. Randall – Director, Financial Flows and Multinational Enterprises Division
L.O. Stone – Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou – Director, Current Economic Analysis Division
J.S. Wells – Director General, System of National Accounts (Current) Branch
M. Wisenthal – Director General, Institutional and Public Finance Statistics Branch
N. Cholette – Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at : Current Economic Analysis Division, 23rd. Floor, Section O, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review,* Current Economic Analysis Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

125 Section 13 Finance

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 10, Table 5 – Retail Trade – consumer credit outstanding

Two series "General merchandise stores, D 652278 and Variety stores, D 652280" have been discontinued with this issue.

Section 13, Table 11 – Federal government budgetary revenues

The series "Social development tax, D 4593" has been discontinued with this issue.

# Financial Activity in Canada in 1977

## An Overview

The total volume of funds raised by the domestic non-financial sectors of the Canadian economy increased substantially during 1977; close to $46 billion was raised, an increase of 11.9 per cent over the 1976 volume. Despite the large increase in the demand for credit, recourse to foreign capital markets by Canadian borrowers was markedly reduced from 1976; indeed, this was the most conspicious feature of financial activity during the year and it had a number of important secondary repercussions. In 1977 the foreign sector accounted for 11 per cent of total funds supplied (see table 1) down from 23 per cent in the previous year.

In the public sector, borrowing by the federal government was well above the pace recorded in 1976 and increased use was made of treasury bill financing. Net borrowing by the provincial government sector declined from $1.7 billion in 1976 to a negligible amount in 1977; nevertheless, substantial demands on capital markets were made and a large increase in the financial assets of the sector occurred. Borrowing by the associated enterprises of government, however, was well below the previous year's flow.

During 1977 there was a definite shift towards long-term borrowing on the part of private non-financial corporations. Long-term borrowing accounted for over 60 per cent of the total of funds raised by this sector via conventional credit market channels. Equity financing, particularly floating-rate preferred shares was a prominent feature of corporate finance in 1977. There appears to have been some balance sheet restructuring on the part of private non-financial corporations during 1977, however, this phenomenon does not stand out clearly in the data.

Mortgage flows accounted for approximately one third of the total volume of funds raised by the domestic non-financial sectors up from 27 per cent in 1976, while the flow of consumer credit declined both absolutely and as a proportion of total funds raised by the household sector. Direct lending assumed heightened importance in 1977 relative to last year. Associated with the tendency toward long-term finance the proportion of total funds supplied that was intermediated by the chartered banks declined while the relative importance of intermediation by other private domestic financial institutions increased.

The easing in the demand for short-term credit, together with the efforts of the monetary authorities to stimulate the growth of the money supply in the first half of the year combined to put downward pressure on short-term interest rates which dropped approximately 105 basic points over the first six months of the year. In the second half of the year short-term interest rates fluctuated over a 50 basis points range in the case of finance company paper and over a 20 basis point range in the case of 3 month treasury bills. In the United States, however, short-term interest rates moved upwards as the demand for short-term financing increased. These movements in short-term interest in Canada and the United States led to a rapid narrowing of the short-term uncovered interest rate differential between the two countries. Long-term interest rates fluctuated within fairly narrow bands in both countries; however, the movements in long-term interest rates were, on balance, such as to decrease the attractiveness of foreign capital markets to Canadian borrowers.

## Real Economic Activity

During 1977 the increase in overall economic activity slowed compared to the previous year; measured in current dollars GNP increased by 9.3 per cent following a 14.9 per cent incresase in 1976; in constant dollar terms GNP increased by rates of 2.6 per cent and 4.9 per cent in 1977 and 1976 respectively. The expansion of economic activity in a number of Canada's trading partners stalled somewhat in 1977; although, the United States economy remained in a vigorous expansion phase. Domestic final demand in Canada was weak and the external sector was the major source of spending strength as the effects of the falling Canadian dollar on spending flows began to surface.

[1] Unmatured Canada Savings Bonds are included in the Total shorter term.

Note: Since financial instruments are not homogeneous as to term the table is only indicative of broad tendencies.

In real terms both expenditures by persons and current expenditures by the government sector grew slowly by historical standards. Business real gross fixed capital formation, which grew weakly in 1975 and 1976 declined by 0.6 per cent in 1977. The weakness in capital formation is not unique to Canada, investment activity has been less than dynamic in most of the western industrialized countries for sometime now. Following a strong accumulation of inventories in 1976, there was a modest amount of inventory liquidation in 1977; measured in 1971 dollars the value of the physical change inventories amounted to $1,257 million in 1976 and -$64 million in 1977.

Gross saving by the private non-financial corporate sector increased by 13.2 per cent in 1977 while net saving grew by 17.2 per cent. The corporate profit picture was not as strong as the net saving figures suggest, however, since a large portion of profits in a period of rising prices is a reflection of accounting procedures which do not adequately adjust revenue for increases in the cost of replacing both inventories and capital equipment used in the process of current production and sales.

The ratio of personal savings to personal disposable income remained above 10 per cent for the fourth consecutive year. High personal savings rates have also been experienced in a number of O.E.C.D. countries, although in several cases the average savings rates appear to have fallen back toward more traditional levels.

## Short-Term Paper and Bank Loans

Close to $0.8 billion in net new funds was raised in the short-term paper market with the increases in outstandings being concentrated in the first and third quarters. For the year as a whole net funds were raised in this form by venture capital companies, leasing companies, sales finance companies and consumer loan companies. Treasury bill financing played a more important role in the borrowing activity of the federal government in 1977 compared to recent years. The net increase in treasury bills outstanding amounted to $2,470 million up from $1,645 million in 1976. A large proportion of the increase in treasury bills outstanding was acquired by non-traditional purchasers; a substantial amount, $0.6 billion, lodged in the residual sector. Short-term rates moved downward in Canada in 1977; the 3 month treasury bill rate, for example, began the year at 8.14 per cent, bottomed at 7.05 per cent in May, and ended the year at 7.17 per cent.

The relative importance of bank loans as a source of funds for the domestic non-financial sectors declined in 1977. In 1976 bank loans accounted for 16 per cent of the total volume of funds raised by the domestic non-financial sectors, the corresponding percentage for the period under review was 9 per cent. With the slow-down in the demand for bank loans, acquisitions of mortgages and corporate securities became more important components of the increase in the portfolios of the chartered banks. The interest rates on bank loans fell over the year; the rate on new demand loans averaged 8.68 per cent in the fourth quarter of 1977 down from 10.66 per cent in the fourth quarter of 1976.

## Bonds

In 1977 net new issues of bonds amounted to $18.3 billion, a 10 per cent increase over the flow of net new issues in 1976. The government sectors together with their associated enterprises accounted for close to 84 per cent of the total, (where the total includes issues placed with the social security funds). A substantial portion of the corporate issues

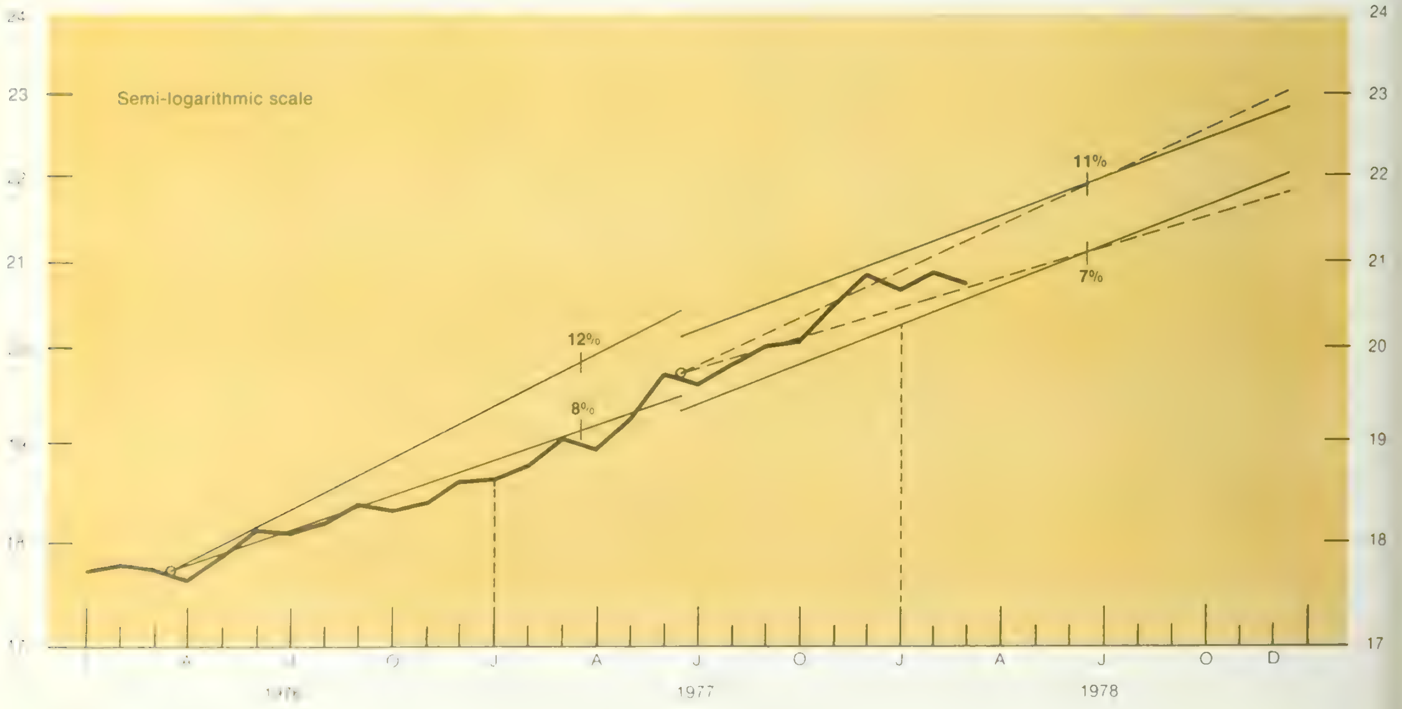
(Seasonally Adjusted)



(1) Currency outside banks plus canadian dollar demand deposits at chartered banks

placed domestically were in the form of income debentures. The proportion of total federal government net bond borrowing in the form of Canada Savings Bonds was similar to that of the previous year, about 30 per cent, a proportion of which was markedly less than that of 1975 when it stood at 76 per cent. The foreign sector continued to stand out as an important purchaser of Canadian bonds as non-residents added $4.9 billion in Canadian bonds to their portfolios; nevertheless, the role of the foreign sector as a purchaser of Canadian bonds declined dramatically in 1977. The foreign sector accounted for over 39 per cent of the uptake of gross new issues of Canadian bonds in 1976, while this percentage shrank to marginally more than 24 per cent in 1977.

Long-term interest rates were relatively stable over the year. Movements in relative long-term rates reflected to some degree, the pattern of new issues. The yield to maturity on long-term Government of Canada securities rose by 30 basis points and closed the year at 8.77 per cent. The yield to maturity on industrials declined by 12 basis points and ended the year at 9.71 per cent. The downward adjustment in short-term interest rates, combined with relatively stable long-term rates, served to increase the acclivity of the yield curve.

## Shares

Net new issues of shares amounted to $3.0 billion in 1977 with non-financial private corporations accounting for three-quarters of the issues. The second quarter witnessed the debut of floating-rate preferred shares, most of which were acquired by the chartered banks[1]. There would appear to have been some substitution of preferred shares for term loans both on the part of issuers and on the part of lenders. There was a moderate rise in stock prices over the year; the Toronto Stock Exchange composite index increased by 4.8 per cent and closed the year at 1,059.6. Within this composite index there was considerable diversity of performance with oil and gas stocks rising strongly and metals and mineral declining. . .

## Consumer Credit and Mortgages

Consumer credit outstanding increased by $3.5 billion and attained a level of $30.9 billion by the end of the year. The net increase in consumer credit was 10.2 per cent below the 1976 flow. Associated with the slower rate of expansion of consumer credit in 1977 was a slackening in the increase in spending on durables and semi-durables. Personal expenditures on durable goods increased by 7.7 per cent in 1977 following increases of 11.1 per cent and 17.4 per cent in 1976 and 1975; the pattern for expenditures on semi-durables was similar. While spending on durables and semi-durables tends to be reflected in the consumer credit figures, the reflection is hazy rather than clear. The flow of spending on durables and semi-durables is likely to be more closely linked to the flow of new consumer credit rather than the net change in consumer credit extended[2]. The existence of roll-over mortgages and mortgage interest rates that were lower than consumer credit rates may have encouraged some substitution of mortgage financing for consumer credit. The level of economic uncertainty and the higher level of rising unemployment during 1977 compared to 1976 may have resulted in some precautionary avoidance of consumer debt on the part of households. The weakness in the demand for consumer credit was accompanied by widespread reductions in interest rates on consumer loans in the second half of the year.

During 1977 the domestic non-financial sectors of the economy raised $16.8 billion in the form of mortgages. At the end of the year the level of mortgage loans outstanding stood at $97 billion. On the supply side, 54 per cent of the flow of funds into the mortgage market originated with the deposit accepting institutions, 12 per cent with the contractual savings institutions, 7 per cent with the public sector (including government enterprises) and 22 per cent with the household and residual sector. Despite the increased demand for mortgage financing, the supply of funds was ample and mortgage interest rates declined over the year. The conventional mortgage rate fell from 11.27 per cent at the end of 1976 to 10.33 per cent at the end of 1977. There was some tightening in the non-credit terms for mortgage approvals primarily in response to some deterioration in mortgage arrears and a rise in the number of personal bankruptcies. A similar tightening in non-credit terms also occurred in the consumer credit market.

## Primary Lending

During the year under review the domestic non-financial sectors of the economy channelled $36.5

---

[1] See, "A Newcomer to Canadian Financial Markets: The Floating Rate Retractable Preferred Share", *Financial Flow Accounts*, IIIQ 1977 p. XIX-XXII.

[2] Aggregate figures for new extensions of consumer credit are not available.

billion into financial institutions and credit markets[3]. This represents a 23.2 per cent increase over the previous year's flow. A noticeable feature of credit market activity in 1977 was the importance of direct lending; approximately 28 per cent of primary lending was direct compared to 15 per cent in 1976. Direct lending, especially in recent years, assumes heightened importance in the fourth quarter and is associated with the sales of Canada Saving Bonds. In 1977, however, direct lending was substantial in both the first and second quarters, in addition the fourth quarter flow of $4.6 billion was well above the net increase in holdings of CBS's of $1.7 billion. The increase in holdings of currency and deposits of $19.7 would appear to overstate the increase in holdings of liquid assets of the domestic non-financial sectors, particularly the household sector. A portion of the increase is associated with contributions to, and earnings on registered retirement savings plans, and is subject to a lock-in effect.

## Monetary Aggregates

Monetary policy in the first half of the year was directed towards stimulating the rate of expansion of the money stock, which had been lagging for several quarters in the neighbourhood of the lower bound of the target range, then in effect, of 8 per cent to 12 per cent. In addition to managing the reserves of the chartered banks in such a way as to encourage downward pressure on short-term interest rates and thereby encourage monetary growth, the Bank of Canada lowered the Bank Rate in steps of 50 basis points to 8.00 per cent on February 1, 1977 and to 7.50 per cent on May 9, 1977. The secondary reserve ratio which had been at 5.50 per cent since March 1976 was reduced to 5.00 per cent coincident with the February 1 reduction in the Bank Rate. A number of privately administered rates as well as short-term market determined rates declined following the Bank Rate changes.

On October 7, 1977 the Governor of the Bank of Canada announced a revised target range of 7 per cent to 11 per cent with the average outstanding M1 for June 1977 as the base. The interpretation of the target range was substantially modified at that time, however. The new target is a band of uniform width around the mid-point of the target range. The change in the specification of the target range has the effect of widening the target range in the time interval of up to one year from the base period.

Early in the new year, exchange rate considerations came to play a predominant role in the setting of monetary policy.

## The Exchange Rate and International Reserves

The Canadian dollar, which began to depreciate against the U.S. dollar in late 1976, continued to fall through 1977 and into 1978. During 1977 the Canadian dollar followed an irregularly declined path, depreciating by 7.79 per cent against the U.S. dollar, reaching a nadir for the year in October at $0.8963 U.S., and closed the year at $0.9141 U.S. Since the United States dollar depreciated relative to a number of other currencies, on a trade-weighted basis the decline in the Canadian dollar was even more pronounced and amounted to 9.4 per cent for the year.

During 1976 net capital movements of $4,709 million more than covered the deficit on current account and there was an accumulation of $522 million in official reserves. In 1977, however, long-term portfolio borrowing abroad was sharply reduced; while the current account deficit increased only marginally to $4,238, the net capital inflow amounted to $2,817 million and there was a reduction of international reserves of $1,421 million due to official transactions[4].

The monetary authorities intervened in the foreign exchange market on several occasions to prevent the Canadian dollar from following an overly erratic course as it adjusted downward. Measured in terms of United States dollars, Canada's official reserves declined from $5,843 at the end of 1976 to $4,607 at the close of 1977. On October 27, 1977 the Minister of Finance announced the establishment of a stand-by credit arrangement with the chartered banks to replenish the Exchange Fund's holdings of U.S. dollars if required. Although no drawings were made in 1977, this facility was utilized in the first quarter of 1978[5]. ■

---

[3] It should be noted that this is only an approximate operational couterpart to the theoretical concept of primary or ultimate lending. Primary lending is elusive, both as a measurable aggregate and as a theoretical notion. In this article the measure of primary lending has been restricted to the increase in financial assets of the domestic non-financial sectors of the economy. Roily assets, such as other assets, trade receivables and claims which are on the fringes of organized credit markets have been excluded. The introduction of the foreign sector and/or the financial sector results in considerable ambiguity and for that reason they have been excluded.

[4] While the current account deficit was similar in magnitude in 1976 and 1977, the composition was quite different. A detailed discussion of developments in the balance of payments on 1977 can be found in *Quarterly Estimates of the Canadian Balance of International Payments*, fourth quarter 1977 (Catalogue No. 67-001), Statistics Canada, Ottawa K1A 0T6

[5] The treatment of drawings on this facility in the Financial Flow Accounts and the Balance of Payment Accounts differ. An article outlining the two different treatments and the reasons behind the differing treatments will appear in the first quarter 1978 issue of the *Financial Flow Accounts* (Catalogue No. 13-002).

# The Meaning and the Economic Significance of Seasonality

Estela Bee Dagum*

## I. Seasonality, its causes and characteristics

A great deal of data in business, economics and natural sciences occur in the form of time series where observations are dependent and where the nature of this dependence is of interest in itself. The time series are generally compiled for consecutive and equal periods, such as weeks, months, quarters, years.

From a statistical point of view, a time series is a sample realization of a stochastic process, i.e. a process controlled by probability laws. The observations made as the process continues indicate the way it evolves.

In the analysis of economic time series, it is traditional to distinguish different types of evolution; namely, (a) the trend, (b) the cycle, (c) the seasonal variations and (d) the irregular fluctuations.

The trend corresponds to a variation in some defined sense persisting over a long period of time, that is, a period which is long in relation to the cycle. In some cases, it is a steady growth; while in others, the trend may move downward as well as upward.

The cycle, usually referred to as the business cycle is a quasiperiodic oscillation characterized by alternating periods of expansion and contraction.

The seasonal variations represent the composite effect of climatic and institutional events which repeat more or less regularly each year. These three types of fluctuation are assumed to follow systematic patterns (they are the signals of the process).

On the other hand, the irregulars are unforeseeable movements related to events of all kinds. In general, they have a stable random appearance but, in some series, extreme values may be present. These extreme values or outliers have identifiable causes, e.g. floods, unseasonal weather, strikes; and, therefore, can be distinguished from the much smaller irregular variations. Figure 1 shows the pattern of an unadjusted series and the three typical components (Dagum, 1974).

Among all these components, the influence of the seasonal fluctuations in the human activity has been felt from earlier times.

The organization of society, the means of production and communication, the habits of consumption and other social and religious events have been strongly conditioned by both climatic and conventional seasons. The seasonal variations in agriculture, the high pre-Easter and pre-Christmas retail sales, the low level of winter construction, are all general knowledge.

The main causes of seasonality, the climatic and institutional factors are *exogeneous* to the economic system and cannot be controlled or modified by the decision makers in short periods of time. The impact of seasonality in the economic activity, however, is usually not independent of the stages of the business cycle. It is well known, for example, that the seasonal unemployment among adult males is much larger during periods of recession than during periods of prosperity.

Another main feature of seasonality is that the phenomenon repeats with certain regularity every year but it may *evolve.* The latter is mainly due to systematic intervention of the government and to technological and institutional changes as well; and it is more the general case than the exception for economic time series. Therefore, the assumption of stable seasonality, i.e. of seasonality being representable by a strictly periodic function, can be used as a good approximation for few series only. In effect, even in the extreme cases of those activities where seasonality is mainly caused by climatic conditions, e.g., agriculture, fishing, forestry, the seasonal variations change, for weather itself measured by the temperature and quantity of precipitation changes.

There are many other reasons that can produce temporal shifts in the seasonals. A decline in the participation of the primary sector in the Gross

Irregular Component

National Product will modify seasonal patterns in the economy as a whole, as will a change in the geographical distribution of industry in a country extending over several climatical zones. Changes in technology alter the importance of climatic factors. Customs and habits change with a different distribution of income, and thus, modify the demand for certain goods and its corresponding seasonal pattern.

Once the assumption of stable seasonality is no longer valid, new assumptions must be made regarding the nature of its evolution: if seasonality changes, is it slowly or rapidly? Is it gradually or abruptly? Is it in a deterministic or stochastic (probabilistic) manner?

Today, the most widely accepted hypothesis is that seasonality moves gradually, slowly and in a stochastic manner.

A third characteristic of seasonality is that the phenomenon can be *separated* from other forces (trend, cycle and irregulars) that influence the movement of an economic time series and can be measured.

The seasonal variations are distinguished from trend by their oscillating character, from the cycle by being confined within the limits of an annual period, and from the irregulars, by the fact of being systematic.

For labour force series, the causes of seasonality are found in the main factors that influence the demand for and supply of labour.

The seasonal variations in employment and unemployment of adult males are mostly of climatic origin and strongly conditioned by the stages of the business cycle. The main reason for this is that while there is practically no seasonality in the supply of adult males, there is a large amount of seasonal variations in the demand side. This group is mainly absorbed by the primary sector (construction, agriculture, mining, fishing and forestry) where seasonality is mostly climatic with very large oscillation, and by the industrial sector, where seasonality is mostly induced by the seasonality in the primary sector.

On the other hand, seasonality for females and young males stems from the side of the demand as well as of the supply of labour.

Females and young males are mainly employed by the tertiary sector where seasonality trends to be originated by institutional events (Christmas, Easter, Federal Taxes deadlines). Similarly, from the viewpoint of the supply, seasonal variations occur because this group tends to move in and out-of the labour force in accordance with the school year.

## II. The economic significance of seasonality and the need for seasonally adjusted series

The seasonal variations affect the economic sectors in different degrees. Nor is it only the intensity of the primary effects of the seasons that differs for the various economic activities, producing seasonal swings of varying size or amplitude, the timing of these effects is also different, creating different patterns as the season begins in one month or another. Thus, for example, in winter occur both the seasonal low in construction and the seasonal peak in retail trade. The seasonal amplitudes for both sectors aso differs significantly, being much larger for construction than for retail trade.

Similar to the business cycle, the presence of seasonality in the economy introduces a desequilibrium in the allocation of the resources, thus implying an extra cost. Because of the seasonal variations, the economy has a supply of labour, equipment and raw materials in excess to what it would be required if the activity proceeds at an even rate throughout the year. Since these surpluses may arise also from the different impacts of the other components (trend, cycle and irregulars) on the economic processes, it becomes very difficult to estimate the actual cost imposed by seasonality.

Some attempts of measurement have been made by S. Kuznets (1933), R. Baron (1973), D.A. Dawson et al (1975), and S. Judek (1975). Thus, for example, Kuznets (1933) suggests two measures of the degree of over-capacity in industry attributable to seasonal variations: one gives the total difference in activity between each of the months and the months of peak output; the other the amount by which the months below 100 depart from 100. The idea is that the seasonal peak months measure the normal plus the latent capacity of the industry, therefore, an output below the seasonal peak indicates an inadequate utilization of the maximum possible capacity.

On the other hand, an output below a seasonal index of 100 indicates an inadequate utilization of the normal capacity of the industry.

The same idea is applicable to the surplus of labour. If the seasonal peak in employment indicates the number of workers attached to a given industry, then the average monthly departure from the peak measures the average monthly seasonal unemployment and hence the surplus of labour that is in the industry because of seasonal swings. If, however, only the annual average is considered the correct estimate of labour attached to the industry, then only departures below 100 should be considered as measuring seasonal unemployment and excess of labour supply.

Because seasonality ultimately results from non-economic forces, external to the economic system (climatic and institutional factors) its impact on the economy as a whole cannot be modified in a short period of time. Therefore, it is of the interest of decision makers to have the seasonal variations removed from the original series to obtain a seasonally adjusted series. In this manner, the variations of a seasonally adjusted series are due to variations only in the trend, the cycle and the irregulars. Note, however, that the removal of seasonal variations from a time series does not indicate how the series would have moved had there been no seasonal variations, rather it shows more clearly the trend-cycle abstracting from seasonality.

The information given by seasonally adjusted series plays a very important role in the analysis of current economic conditions, particularly, in determining the stage of the cycle at which the economy stands. Such knowledge is useful in forecasting subsequent cyclical movements and provides the basis for decision making to control the level of the economic activities. It is particularly important around turning points since, e.g. failure to recognize the downturn in the business cycle may lead to the adoption of policies to curb expansion when, in fact, a recession is under way (Shiskin, 1957).

In the absence of seasonally adjusted data, analysts who wish to get a picture of the economic situation not distorted by exogeneous variables related to the seasonal variations, may make comparisons with the same month of the year before. However, apart from other considerations, the basic problem with same-month-year ago comparisons is that they show only what has happened a year after, not what was happening during the year nor what is happening currently. To evaluate the current state of the economy, the analyst should be able to measure cyclical changes for each month over less than one-year span, e.g. to compare May with April (one-month span) or May with February (three-month span).

Decision making based on the raw data can lead to wrong policies, especially if the series is strongly affected by seasonal variations. The average absolute month percentage change in the seasonal variation can be much greater than the corresponding changes in the irregular or trend-cycle.

For example, if we compare the level of the raw unemployment for January and September 1976 from Table I, we conclude that unemployment was decreasing. However, the same phenomenon is observed for previous years since the decrease is mainly due to the seasonal variations that affect the level of the series.

Table I

Unemployment Canada
Both Sexes 15 Years and Over
(unadjusted for seasonal variations)

| | January | September |
|---|---|---|
| 1976 | 800 | 670 |
| 1975 | 759 | 631 |
| 1974 | 596 | 468 |
| 1973 | 654 | 459 |

If we look now at the corresponding seasonally adjusted figures from Table II, we get a clearer picture of which are the current economic conditions for each year. In effect, for 1976 the conclusion is that the level of unemployment was increasing, which coincided with the slowdown in the economy. On the other hand, in 1973 the level of unemployment was decreasing which coincided with the fact that the economy was growing.

Table II

Unemployment Canada
Both Sexes 15 Years and Over
(adjusted for seasonal variations)

| | January | September |
|---|---|---|
| 1976 | 695 | 750 |
| 1975 | 651 | 715 |
| 1974 | 507 | 532 |
| 1973 | 560 | 527 |

The measurement of seasonality is also very useful for short term decision making. The knowledge of the seasonal pattern of the economic activities facilitates a better planning of the economic resources during the periods of peakloads and of inactivity. This knowledge can also be applied for the dovetailing of economic activities characterized by opposite seasonal patterns so that resources which formerly served only one purpose can serve additional purposes and thus reduce the burden imposed by seasonality to the whole economy.

# Observations

## Pension Plans in Canada 1976

At the beginning of 1976, participation in occupational pension plans reached a record level of over 3,900,000 employed workers, up 14 per cent from the previous study conducted in 1974. Continuing growth on participation, coupled with demographic trends that point to increased aging of the population, has generated widespread interest in the private pension system not only by technical specialists but also by the public at large. Development of the Statistics Canada computerized pensions "data bank" provides a basic tool for the examination, analysis and understanding of existing plans. Stored in the "data bank" is a wide range of information from which only selected key characteristics have been chosen for publication. The selection was based on two main criteria. Firstly, to maintain a consistent published data series so that each succeeding publication will be comparable with previous issues, key characteristics are repeated. Secondly, to reach as wide a spectrum of the interested public as possible, reports focus on those trends and developments that are of more general interest. In earlier issues, basic concepts and technical terms were described in considerable detail in the textual section, supplemented by technical noted. This has not been repeated in the current publication, but readers may refer to the 1970 or 1974 publications for elaboration of concepts.

Since the primary focus of this study is to provide some basic material for interested laymen, the selection of characteristics has been limited. The professional and technician may be interested in either more detailed data or other unpublished characteristics of pension plans. Unpublished material is available and may be obtained by contacting Mr. Harry Weitz (613-992-2776), Chief, Pensions Section, Labour Division, Statistics Canada, Ottawa K1A 0T6.

Copies of *Pension Plans in Canada 1976* (Catalogue No. 74-401, Price: $1.40) can be ordered from Publications Distribution, Statistics Canada, Ottawa K1A 0T6 ☐

## Annual Review of Science Statistics 1977

This is the first of the annual review. It replaces a variety of annuals and biennials concerned with statistics of science and technology. These were:

| | |
|---|---|
| 13-202 | *Federal Government Activities in the Natural Sciences* |
| 13-203 | *Industrial Research and Development Expenditures in Canada* |
| 13-205 | *Federal Government Activities in the Human Sciences* |
| 13-209 | *Expenditures of Provincial Non-profit Industrial Research Institutes* |
| 13-403 | *Research and Development Expenditures in Canada* |
| 13-404 | *Expenditures in Scientific Activities by Private Non-profit Organizations.* |

There are now only two Statistics Canada publications concerned with science statistics: this review and a Service Bulletin, *Science Statistics* (Catalogue No. 13-003), will be published at least eight times a year. Since it is restricted to five to six pages an issue, an issue will normally contain only highlights from a recent survey, summary tables from special projects, and notifications of tabulations available on request.

This review is intended:

1. to provide historical data for users and libraries;
2. to provide sector and reconciled national statistics;
3. to give national projections for one or two years beyond available reported actual data; and
4. to reproduce questionnaires used during the year.

However, the review is published in order to be used. Within department spending limits and publishing rules we are free to develop the review in whatever way seems most useful to our national and international audience. Please make any suggestions which you feel would make the review more useful to you.

For further information, please contact Mr. H. Stead (613-995-3014), Chief, Science Statistics Centre, Education, Science and Culture Division, Statistics Canada, Ottawa K1A 0T6.

Copies of the publication *Annual Review of Science Statistics 1977* (Catalogue No. 13-212, Price: $2.10) can be obtained from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. ☐

## Market Research Handbook 1977-78

The *Market Research Handbook,* 1977-78 is now available. Its 674 pages, with 197 tables, provide the greatest array of Canadian marketing information published in a single volume. Key economic data are supplied on the nation, provinces and territories, 22 metro areas and 38 other population centres.

Sections include: selected economic indicators; government revenue, expenditure and employment (federal, provincial and local); merchandising and services; population characteristics; personal income and expenditure; housing; motor vehicles; household facilities and equipment; metropolitan area data; census agglomeration data.

For further information, contact David Van Luven (613-996-9301), Distribution and Analysis Section, Merchandising and Services Division, Statistics Canada, Ottawa K1A 0T6.

Copies of *Market Research Handbook* 1977-78 (Catalogue No. 63-224, Price: $9.75) are available from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. ☐

## Historical Compendium of Education Statistics From Confederation to 1975

The *Historical Compendium of Education Statistics* has been produced in response to growing demands for a definitive set of historical statistics on Canadian education. Key variables such as enrolment, teachers, and finance at the elementary, secondary, and post-secondary levels are shown from the first year for which data are available to 1975. Some series, which extend back to Confederation in 1867, include estimates derived from various sources; these are unlikely to be revised. More recent statistics, from 1970-1975, also include some estimates and revisions will be made as new data are received.

These time series display trends and reflect social, economic and educational developments over a long period and will serve as a primary reference for Canadian education statistics.

For further information please contact Mr. Z. Zsigmond (613-995-9685) Chief, Projections Section, Education, Science and Culture Division, Statistics Canada, Ottawa K1A 0T6

*Historical Compendium of Education Statistics From Confederation to 1975* (Catalogue No. 81-568, Price: $5.25) can be obtained from Publications Distribution, Statistics Canada, Ottawa K1A 0T6. ☐

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506.

[2] Includes logging, fishing, trapping and hunting.

[3] Includes mechanical and construction.

[4] Includes a small number in non-specified occupations.

[5] Does not include students entering Canada on students' visas.

[6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force

---

[1] Figures for the year ending and quarters of 1974 represent the actual number of events reported by the provinces. The counts for the year 1975 are provisional while those for the succeeding years are estimates. The figures for Yukon and Northwest Territories for the quarters in the year 1975 are estimates.

## Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

## 1–Income and expenditure accounts

### Table 1.1: National income and gross national product (millions of dollars)

| Year and quarter | Wages, salaries, and supplementary labour income | Military pay and allowances | Corporation profits before taxes[1] | Deduct dividends paid to non-residents[2] | Interest & misc investment income[3] | Accr'd net income of farm operators from farm prod[4] | Net income of non-farm un-incorp business incl rent[5] | Inventory valuation adjust.[6] | Net national income at factor cost | Indirect taxes less subsidies | Capital consump allowances & misc val adj | Residual error of estimate | GNP at market prices | GNP at market prices excl accrued net income of farm operators |

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series

**For source see Table 1.9.**

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] Vacancies for full-time, casual, part-time, seasonal and temporary jobs which were immediately available. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability.

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. [3] Due to postal strike the mail sample was reduced. These estimates should be used with caution due to their reduced reliability

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups from January 1973 forward are based on the 1970 Standard Industrial Classification. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 3 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities [4] Excludes domestic service

---

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 11. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 10. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.
[4] Except machinery and transportation equipment industries

## Table 13 Average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification (dollars)

---

[1] The data in Tables 10 to 17 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products, knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing

---

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [2] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements.

## Section 6 · Manufacturing

70 1. Total Inventories, Shipments and Orders in Manufacturing
71 2. Manufacturing Shipments by Industry
73 3. Manufacturing Inventories by Industry
75 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
76 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
77 6. Estimated Value of Goods in Process and Finished Products by Economic Use Classification
78 7. Tobacco and Beverages
78 8. Rubber
79 9. Rubber Products
79 10. Raw Hides, Skins and Finished Leather
80 11. Footwear Production
81 12. Production of Sawn Lumber
81 13. Pulpwood, Wood Pulp and Newsprint
82 14. Primary Iron and Steel
83 15. New Motor Vehicles
84 16. Refrigerators, Freezers, Washing Machines and Clothes Dryers
84 17. Radio and Television Receiving Sets

## Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

| Annual average and month | Shipments[1] | New orders received during month[2] | Unfilled orders at end of month | Inventory at end of month |  |  |  |  |  | Ratio of inventories owned to shipments |
|---|---|---|---|---|---|---|---|---|---|---|
|  |  |  |  |  |  | All inventory held |  |  |  |  |
|  |  |  |  | Owned[3] | Held but not owned | Total | Raw materials | Goods in process | Finished products |  |
| D | 310000 | 310060 | 310106 | 310336 | 310382 | 310152 | 310198 | 310244 | 310290 | 310530 |

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long term contracts result in large intermittent shipments, for these a monthly estimate of work put in place has been estimated. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures.

---

[1] Because the supplementary classification for automative products consist of industries which are also included in the appropriate economic use group this series is inclusive of those aggregated for the Canada total. Note: As of our June 1977 issue all series have been revised and adjusted to the 1974 Census of Manufactures

**Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 5. Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

| | Inventories owned | | | | | | | Inventories held raw materials | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Consumer goods | | | | | | | Consumer goods | | | | | | |
| Annual average and month | Non-durable | Durable | Machinery and equipment | Construction materials and components | Other intermediate goods & supplies | Export-based industries | Supplementary classification automotive products | Non-durable | Durable | Machinery and equipment | Construction materials and components | Other intermediate goods and supplies | Export based industries | Supplementary classification automotive products |

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distrubution code

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] The above table covers all sales to users and includes sales by manufacturers through their dealers and agents as well as the sales of importers made directly to users. Even though sales are to users, i.e. farmers, values are stated at the dealer's net buying price or at wholesale price

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] Farm share only of motor vehicles. [3] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [4] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Since January 1975 total milk production has been obtained by adding sales off farms to first receivers (usually marketing boards) and volume used on farms for feeding and farm house consumed. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Exclusive of Newfoundland; includes hatching eggs

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage as bologna, salami, blood pudding etc. [6] Includes solid, coated, bulk, packages and novelties.

---

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only.

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Imports by Commodities (65-007), Statistics Canada.**

## Section 12 · Transportation

122 1. Carloadings of Revenue Freight
123 2. Operating Statistics of Canadian Railways
123 3. Operating Statistics of Air Carriers in Canada
124 4. Operating Statistics of Canadian Pipelines
124 5. Shipping Traffic

## Table 1: Carloadings of revenue freight on Canadian railways[1] (thousand cars)

| | Total railway revenue freight loadings (carload and non-carload) ('000 tons) | | | Farm products and food | | | | | | Mine products | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Year and month | unadj | S.A | Total revenue cars loaded (carload only) | Wheat | Other grain and grain products | Fresh fruits and vegetables | Other agriculture products | Animals and their products | Prepared food products | Iron ore and concentrates | Other metal ores and concentrates | Potash | Coal, sand, cement and other mine products |
| D | 5324 | 5325 | 5300 | 5301 | 5302 | 5303 | 5304 | 5305 | 5306 | 5307 | 5308 | 5309 | 5310 |
| 1976 | 241,262 | | 3,774.6 | 227.9 | 197.0 | 12.7 | 17.5 | 20.9 | 54.5 | 674.4 | 187.3 | 91.6 | 487.5 |
| 1977 | 251,112 | | 3,855.8 | 281.0 | 163.5 | 10.9 | 21.1 | 17.9 | 54.3 | 660.1 | 210.5 | 100.3 | 514.2 |

---

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series

---

Note: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres, however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from, insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: Department of Finance.**

## Table 12: Budgetary expenditures by principal classes[1] (millions dollars)

| Fiscal year or month | Department of national defence | Public debt charges | Fiscal transfer & contracting-out payments to provinces | National health and welfare: Family allowances | National health and welfare: Other welfare disbursements | Agriculture | Post office | Public works | Transport | Veterans affairs | Other departments | Total budgetary expenditures |
